DYSON SNO-DEVIL

HEAVY DUTY SNOW BLOWER FOR LIFT TRUCKS!

Remove snow fast, safely, economically

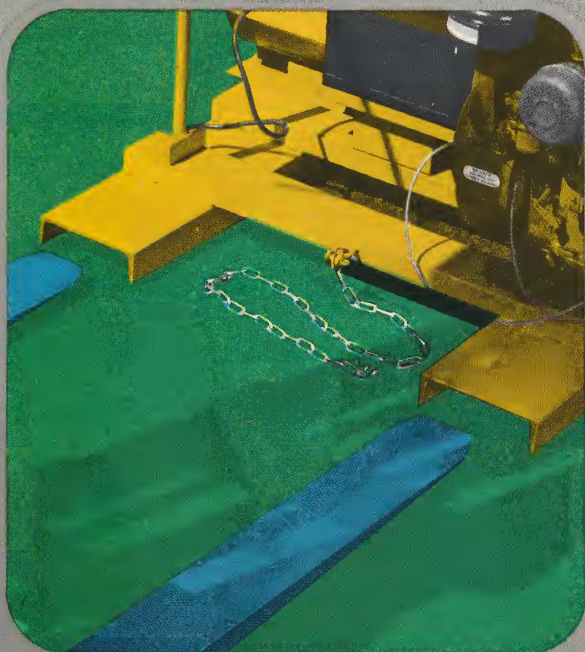

Quickly clears snow and ice around . . .

- . . . industrial plants
- . . . warehouses
- . . . terminals
- . . . shopping centers
- . . . government facilities

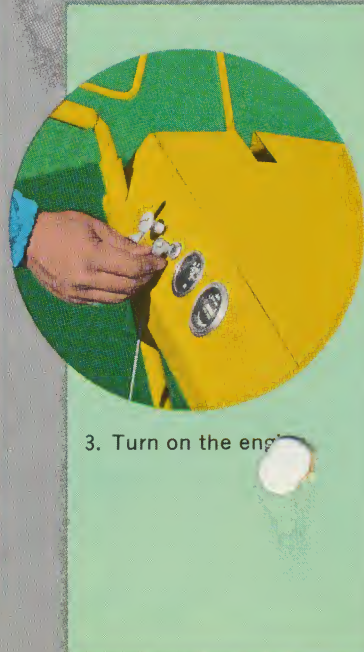

ATTACHES TO YOUR LIFT TRUCK IN A FEW MINUTES!

1. Drive truck under unit

2. Fasten safety chain

3. Turn on the engine

With a **DYSON SNO-DEVIL**

CONVERTS LIFT TRUCKS INTO POWERFUL SNOW REMOVAL EQUIPMENT

The NEW Dyson SNO-DEVIL is a powerful self-contained snow blower that quickly slides onto the forks of electric or gasoline-operated lift trucks. Eliminates the necessity of buying separate heavy-duty snow removal equipment. Converts your materials handling equipment into efficient and effective mobile snow removal units in just a few minutes time!

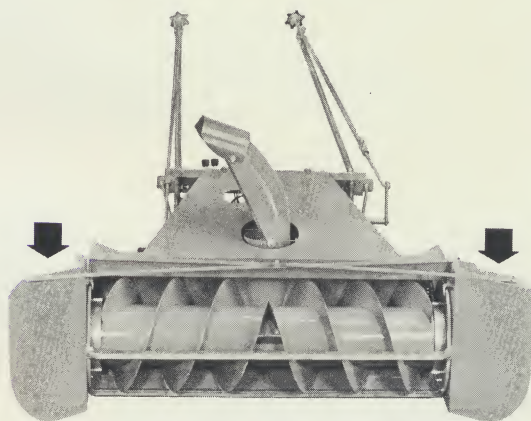

Completely self-contained, the SNO-DEVIL is powered by its own heavy duty 10 hp gasoline engine. Direct chain-drive system keeps auger blades whirling through the deepest snow drifts! Heavy gauge welded steel frame absorbs drift-busting impacts and rugged duty applications.

Traction is no problem either! The weight of the blower hugs the ground to dig into snow banks and piled-up ice.

The efficient snow auger cuts a path over four feet wide, throwing the snow up to 40 feet away . . . out of the way, once and for all! No need to double-back and keep moving the same snow over and over again. Works without straining the fork lift power. Handles as easily as any fork lift load. Lift trucks are much more maneuverable than any other mobile equipment . . . so your snow removal is just

that much easier . . . even in tight locations and corners.

Once the blower is started—and throttled, the driver controls rotary blade action and snow discharge direction from his seat.

DYSON OPTIONAL WINGS CLEAR UP TO 5'6"

It's simple to increase the width of the snow cleared to 5'6"—by adding Dyson's accessory auger housing wings. Easily attached to the housing—they make snow removal extra fast!

4. Adjust throttle

5. Engage drive

6. Control direction of discharge
